

Management Major—Supply Chain Management Track Requirements

The supply chain encompasses activities associated with the sourcing, creation, and delivery of products and services. For any business, doing these in the most effective and efficient way is critical, but few accomplish this on their own. Instead, businesses establish networks of partners to form supply chains. Changes in practices such as reliance on information technology, just-in-time inventory systems, global sourcing, demand-driven strategies, and environmental sustainability initiatives combined with an environment that features greater market volatility and risks have made supply chains more complex and more strategically important. No matter how a company chooses to satisfy its customers and achieve financial objectives, the supply chain is a potent strategic resource to help it deliver more value, lower costs, and faster, more agile responses in the face of steady change.

Name: _____ Expected Graduation Date: _____

To Sign Up

1. Speak with Dr. John Grandzol or Dr. Christian Grandzol about your intentions to complete the track.
2. Declare the SCM Track by filling out a “Change of Program Study Form” to add the SCM Track subplan to the Management Major. The department secretary has these forms and will give it to the department chair for consideration and approval.
3. Consider getting involved with SCM activities happening at BU via the APICS Student Chapter.

Management Core Courses Taken Prior to Track
