This guide will assist you in setting up Thunderbird to work with your student email account using IMAP.

1) When you start Thunderbird for the first time, you will be prompted with a dialog box similar to the one below. Enter your first and last name, your full email address (HuskyID), and your password. You may click the *Remember Password* box if you would like to; however, this should not be done if you are using a shared computer. Click on *Continue* to move to the next step.
2) Next, Thunderbird will attempt to detect the settings on its own. This will not work. Click the Stop Button. For the username, enter your full email address (your HuskyID). Ensure that your settings match the screenshot below, with the exception of the outgoing address.

Enter pod51000.outlook.com as the outgoing server.

After double checking your settings, click the Manual Setup button.
3) After double checking your settings, click the *Manual Setup* button. It will take you to a screen like the one below. Next, we need to setup the outgoing mail server. Click on the *Outgoing Server (SMTP)* option on the left.
4) Click the email address in the right then click the *Edit* button.
5) Ensure your settings match the ones below. You will want to check the *Use name and password box*. Click *OK* once you are finished, then click *OK* on the main dialog window.
Thunderbird IMAP Instructions - For Students

6) To check your mail, click the account name on the left, and click the *Get Mail* button. If this is your first time, it may take a few minutes depending on how many messages you have.
