Problems with Student Databases
If your student database opens but the buttons don’t work, this is likely happening because the database is stored on your c: drive, probably in My Documents. This will have to be added as a trusted location. Follow the steps below.

Add database as a trusted location
Open database, and click on the Office button on the top left.

Click on the Access Options button at the bottom of window.
Access 2007 – Student Databases

Click on Trust Center

Click on Trust Center Settings

Click on Trusted Locations

Click on Add new location
Click on the Browse button.
Click on “My Documents” on the left.
Click on OK.
Put a checkmark in the “Subfolders of this location…” Box and then click OK

Click on OK to get back to the database.

**Close the database**
Then open it again and it should work fine.
