## Troubleshooting Outlook app setup on Android Devices:

### Can't get your BU email account added to your Android device successfully?

1. Be sure you are specifying your full email address as the username and make sure you are typing in your current HuskyID password correctly. Try logging in to Outlook on the Web at <https://webmail.bloomu.edu/> to verify you are using the correct username and password. If it says your password has expired, follow the prompts to change it. If your password is not working, reset your HuskyID password at <https://password.bloomu.edu/> . Then verify you can log in to <https://webmail.bloomu.edu/> successfully before trying to add your email account to your Android device again.
2. Verify you have a currently working connection to the Internet on your device by opening a web browser and trying to get a random off-campus web page to load. If you are on-campus and have just connected to the guest “bloomu” wireless network and haven't yet registered your device, you will only have very limited connectivity which will prevent you from adding your email account (even if it let you download the app from the Play Store). Try forgetting the guest network and instead connecting to the

“bloomu-secure” network and then try adding the email account again. Alternatively, you can try disabling Wifi within Settings, which will make your cell data network connection active (if your device has cell data support), and try adding the email account again.

3. In case there is a bug in your current version, you can try updating your Outlook for Android app if you already had it pre-installed and are not running the latest version. Once you are running the latest software available, try adding the email account again.
4. If you are having a ton of trouble trying to use the Outlook for Android app, you can instead try using the mobile device’s native Email app. Separate instructions are available at <http://intranet.bloomu.edu/documents/tech/email/facstaff-activesync-android.pdf>
